

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PROBLEMS FOR SOLUTION.

ARITHMETIC.

116. Proposed by J. O. MAHONEY, B. E., M. Sc., Professor of Mathematics and Science, Cooper Training School, Carthage, Tex.

Two candles are of the same length. The one is consumed uniformly in 4 hours, and the other in 5 hours. If the candles are lighted at the same time, when will one be three times as long as the other?

117. Proposed by MARCUS BAKER, U. S. Coast and Geodetic Survey, 1905 Sixteenth St., Washington, D. C.

A landed man two daughters had,
And both were very fair;
He gave to each a piece of land,
One round the other square.

At twenty shillings an acre, just,
Each piece its value had;
The shillings that did compass each,
For it exactly paid.

If 'cross a shilling be an inch,
(As it is, very near),
Which had the larger portion, she
That had the round or square?

Also, how many acres did each receive?

[Does any one know the history of this problem?]

*** Solutions of these problems should be sent to B. F. Finkel not later than Sept. 10.

ALGEBRA.

105. Proposed by CHARLES E. MYERS, Canton, Ohio.

Solve for x the following: $a \log(ax^2) = m \log(m)$.

106. Proposed by ELMER SCHUYLER, High Bridge, N. J.

$$\frac{x^3 + x}{y^2 + y} = a; \quad \frac{x^2 + y}{y^2 + x} = b; \quad \text{find } x \text{ and } y.$$

*** Solutions of these problems should be sent to J. M. Colaw not later than Sept. 10.

GEOMETRY.

124. Proposed by B. F. FINKEL, A. M., M. Sc., Professor of Mathematics, Drury College, Springfield, Mo.

Every conic that passes through all the foci of a conic is a rectangular hyperbola.
[From Charlotte A. Scott's *Modern Analytical Geometry*.]

125. Proposed by J. SHEFFER, A. M., Hagerstown, Md.

To find the locus of a point on the surface of an ellipsoid which has the property that the tangent plane at that point is at the given distance, f , from the center of the ellipsoid.

*** Solutions of these problems should be sent to B. F. Finkel not later than Sept. 10.
